

# **Widney High School**

Wilshire District, CA

## **Project Type:**

Telecommunications Infrastructure

## **Project Owner:**

Los Angeles Unified School District

## **Contact:**

Los Angeles Unified School District

E-Rate Department

213-241-1332

## **Final Value:**

\$480,000.00

Completed October 2002

## **Project Description:**

Matrix designed and installed the complete data system at this school consisting of both Fiber and Copper. This school represented a rather unique problem for many reasons. First, it had an attic space that was contaminated with friable asbestos fireproofing that was determined to be in very poor condition. Because of this, the entire system had to be designed by Matrix to be run below ceiling level. Aside from this, another problem was that there was a project starting immediately after this to remove the entire ceiling and all of the asbestos fireproofing. Because of the funding requirements, however, we had to complete the telecommunications project first, with only half of the time that would normally be allowed for a project of this size. Matrix ultimately completed the project in only 5 weeks (three weeks ahead of the EXCELLERATED schedule) and passed inspection on the first night for the entire high school.
